

LONG DIVISION

EXAMPLE:

$$\begin{array}{r} 4 \overline{) 248} \\ \times \quad 62 \\ \hline 4 \overline{) 248} \\ \underline{- 24} \\ 008 \\ \underline{- 8} \\ 0 \end{array}$$

THIS PROBLEM IS AN EXAMPLE OF LONG DIVISION. IT TELLS US THAT $62 \times 4 = 248$

1. $\begin{array}{r} \times \quad \square \\ 6 \overline{) 126} \end{array}$

2. $\begin{array}{r} \times \quad \square \\ 5 \overline{) 240} \end{array}$

3. $\begin{array}{r} \times \quad \square \\ 9 \overline{) 279} \end{array}$

4. $\begin{array}{r} \times \quad \square \\ 3 \overline{) 156} \end{array}$

5. $\begin{array}{r} \times \quad \square \\ 2 \overline{) 102} \end{array}$

6. $\begin{array}{r} \times \quad \square \\ 4 \overline{) 212} \end{array}$

7. $\begin{array}{r} \times \quad \square \\ 7 \overline{) 364} \end{array}$

8. $\begin{array}{r} \times \quad \square \\ 8 \overline{) 648} \end{array}$

9. $\begin{array}{r} \times \quad \square \\ 4 \overline{) 372} \end{array}$
