

## CIRCLES - AREA

$$A = \pi r^2$$

## ANSWERS

Area of a circle =  $\pi \times \text{radius} \times \text{radius}$

TO FIND THE AREA FORMULA OF A CIRCLE, SEPARATE IT AND THEN PUT IT BACK TOGETHER TO FORM A PARALLELOGRAM.

Now your turn. Use the information above and the vocabulary below to fill in the blanks.

Circumference      diameter       $\pi$  (Pi)      radius      3.14      base      height

1.  $\pi$  (pi) = 3.141592653589... or is approximately, 3.14
2. Area of a parallelogram = base  $\times$  height
3. Circumference of a circle =  $2 \times \pi$  (Pi) or 3.14  $\times$  radius
4. Area of a circle =  $\frac{1}{2} \times \text{Circumference} \times \text{radius}$
5. Substitute the circumference formula into the area formula for a circle and simplify.

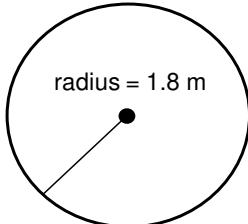

$$\text{Area of a circle} = \frac{1}{2} \times \underline{2} \times \underline{\pi \text{ (Pi)}} \times \underline{\text{radius}} \times \underline{\text{radius}}$$

$$\text{Area of a circle} = \underline{\pi \text{ (Pi)}} \times (\underline{\text{radius}})^2$$

Find the area of each circle.      Use  $\pi = 3.14$

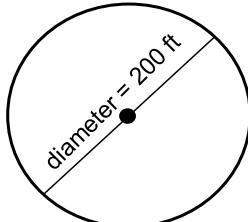

$$A = \pi r^2$$

1.

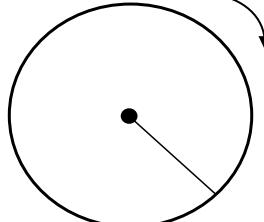

$$\text{Area} = \underline{10.1736 \text{ m}}$$

2.

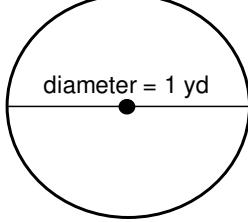

$$\text{Area} = \underline{31,400 \text{ ft}}$$

3.

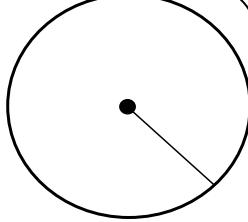

$$\text{Area} = \underline{113.04 \text{ km}}$$

4.

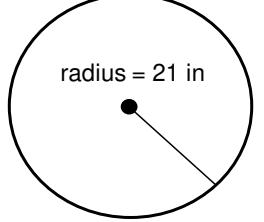

$$\text{Area} = \underline{0.785 \text{ yd}}$$

5.

$$\text{Area} = \underline{706.5 \text{ cm}}$$

6.

$$\text{Area} = \underline{1,384.74 \text{ in}}$$
